BURAK FIDAN

Computer Engineer

+81 070 8455 3140 | 97burakfidan97@gmail.com | Osaka, Japan | burakfidan.com

Summary

Computer Engineer with 7+ years of experience in backend, database, frontend, and mobile development. I've built, led, and launched projects from scratch, and deployed microservices. I speak Turkish, English, and I use Japanese at a conversational level and still learning. I'm focused on learning new technologies and improving myself.

Education

Bachelor's Degree
Computer Engineering | English
Istanbul Marmara University, Turkey, 2023

Languages

- Turkish - Native
- English - Business
- Japanese - Conversational

Experience

Computer Engineer

Eftax Co, Ltd | Osaka, Japan | April 2024 - Current

Nichireki Quotation App

Technologies: NodeJs, TypeScript, ExpressJs, Sequelize, AWS Cognito, AWS Aurora, Docker, Docker Compose, AWS (S3 with LocalStack)

- Nichireki's Quotation App for their internal usage. It will be used for all the branches inside the company for their sales.
- It helps company and it's employees for their sales and quotations. Improves the sales and allows the company to see their performance.

My roles and responsibilities:

- Conducted the necessary planning and research, and developed the backend from scratch.
- Worked with Japanese clients, communicated and planned for development iterations.
- Set up the entire Authentication system with AWS Cognito and synced with Aurora database.
- Setup RBAC (role base access control) and secure endpoints.
- Implemented whole approval flow from creating quote for customer, submitting to manager and approvers, approve/decline and PDF generating with seals of the branch.
- Created all endpoints with proper documentation, swagger and secure.

Food Dietary App

Technologies: Flutter, Dart, PostgreSQL, Python, Django, GDAL, DeepL, Docker, Docker Compose, OpenApi, Github Actions, Fastlane, Flavoring, Shopify, Google ML Kit, AWS (S3, ECS, EC2, Lambda, CloudWatch)

- Map based Food Dietary App where users can purchase products from the Shopify store, find restaurants, stores and tourist spots. It checks ingredient lists via ML Kit to confirm suitability for each user's dietary preferences.
- Over 10,000 downloads on both platforms, and significantly increased website traffic.
- Over 1,000 monthly active users. Almost never had any downtime and works without any interruptions.

My roles and responsibilities:

- Led the mobile team of 3 people. Conducted the necessary planning and research, and developed the application from scratch.
- Mentored one intern and assigned him tasks to teach and make him understand the foundation of the development.
- Set up the entire Authentication system with Google and Apple oauth2, used interceptors to make sure that authentication flow is seamless and works without any issues.
- Set up and optimized Google Maps, created clustering based on zooming, integrated Google ML Kit for text recognition and extraction, implemented CI/CD with Fastlane, Github Actions and flavoring.
- Wrote geo based PostgreSQL queries, improved the response time of the existing endpoints, created complex structured and multi relational models.
- Created translation system and optimized for token usages. Created custom Admin panels and analytics UI and charts.
- Created a location based notification system and created a panel for admins to send the notification to that location.
- Adjusted and set up Docker and Docker Compose for production and testing environments. Increased the backend log performance by 50% and improved the efficiency.
- Setup deeplinking, url redirections, local and cloud notifications for both stores.
- Integrated Shopify via hooks and created point and coupon systems.
- Implemented localization to both backend and mobile to support more than 4 languages and can be scaled to many more languages.

Astrazeneca Japan's Frontend and Backend

Technologies: Flask, Python, DynamoDB, Redis, Next.JS, Tailwind, Typescript, Sentry, AWS CloudFormation, Docker

- AstraZeneca Japan's in-house website. Used by their own employees.

My roles and responsibilities:

- On the backend worked with 5 people and on the frontend worked with 3 people.
- Fix the multiple bugs both on frontend and backend. Adjusted and made changes on Rest API endpoints and reflected on the frontend.
- From the figma, implemented the designs exactly like requests and implemented.
- Fixed complex bugs that are multi-layered and required comprehensive understanding of the code.

ミツケア Frontend

Technologies: Wordpress, Php, Tailwind

- "ミツケア" is a website to introduce information on startups in Health-O Project. Aims to raise awareness of smart health and to help you "find" the smart health service that suits you. Supported and featured by the Osaka Prefectural Government and shown at the Osaka Expo 2025.

My roles and responsibilities:

- I worked with 3 people.
- Developed the website from scratch and implemented the exact same UI from Figma. Added animations that were requested.
- Implement a custom blog system by the needs of the client so that admin can post the blog posts the way they want.
- Even though it was a tight schedule, I delivered the website on time and shipped it to production.

Mental Health App

Technologies: Go, Gin-Gonic, MongoDB, Asynq, Redis, Docker, Docker Compose, Flutter, Dart, Swagger, Bootstrap, AWS (S3, EC2, CloudFormation, Route 53), Github Actions, Fastlane

- For mental health, logging and habit tracking application. Prototype developed and shipped. Application allows album creation, log inputting, habit tracking and sharing.

My roles and responsibilities:

- Designed and implemented RESTful APIs and wrote complex aggregations that aggregated multiple collections with average response times under 150-200ms.
- Worked with 2 people and communicated and planned to deliver on time.
- Implemented JWT authentication with oauth2.
- Implemented and optimized multiple and large image uploads with the task queue and decreased the response time of the image upload, even more than 10+, to less than 200ms. Made sure it works seamlessly and without any issues.
- Always made sure that MongoDB aggregations are top notch and fast. Optimized every level and decreased the response times.
- Created Docker and Docker Compose both for production and local. Documented every step for future developers to run the code without any issues.
- For seamless deployment, created Github Actions and deployed to AWS.

Restaurant Management App

Technologies: Python, Django, Localstack, PostgreSQL, GDAL, Docker, Docker Compose, Github Actions, React.JS, Tailwind, Typescript, AWS (S3, ECS, EC2, Lambda, CloudWatch)

- Application for Restaurant owners to input their menus, ingredients, allergens and information to manage their whole restaurant and provide translations. With the given information, users will be able to filter, search and find the food or restaurants to their taste, dietary preference or allergy.

My roles and responsibilities:

- Designed and implemented Rest APIs to return with the lowest response time possible.
- Created and planned models, constraints, relations and queries with ORM.
- Implemented Admin panel and created custom pages.
- Implemented localization to backend for the required models and the supported languages can be increased any time without any issues.
- Fixed many bugs like filters not working properly, responses not returning the correct calculations or simply calculation or query bugs.
- Fixed Docker for deployment and debugged for AWS.

Kansai Area Real Estate

Technologies: NextJS, Tailwind, Shadcn, Golang, PostgreSQL, Docker, Docker Compose, AWS, Kotlin, Java, Swift, Firebase.

- Real estate website for customers to find and rent or purchase the houses that they want in the Kansai area. Especially targeting the foreigners and providing easy solutions and support.
- The website had an already existing landing page but wasn't enough for the company and wanted to expand it and control everything for themselves.
- The website allows different real agencies to post on the website too.

My roles and responsibilities:

- Setup and created the backend, implemented Rest APIs to serve to the frontend.
- Created the Docker files for AWS Production.
- Planned and implemented the models and wrote the necessary query calculations.
- Created the admin panel, roles and models to create Agency websites where multiple real estate agencies can post, share and manage their real estate.
- Developed the mobile applications natively on both iOS and Android. Refactored the old Java code, migrated the project to Kotlin. Increased the app performance 30%. Restructured the app to MVVM and MVC. Secured the app against Process Death and fixed memory leak issues.

Fullstack Developer

Freelance | July 2022 - June 2024

Content Tracking and Recommendation

Technologies: Go, Gin-Gonic, MongoDB, Redis, Pinecone, OpenAI, Swagger, Github Actions, ReactJS, Tailwind, Flutter, Dart, Heroku, Google Cloud (Compute Engine, CDN), Javascript, Ubuntu, NodeJS, Kotlin, Docker, Docker Compose.

- Entertainment tracking and recommendation app. Users can track the content that they watched or play, get recommendations based on their lists, search and filter by many options.
- Application had runtime over 95% percent without any major crash or bug. Have generated recommendations over 100.000 times.

My roles and responsibilities:

- Planned, architected and developed everything from scratch.
- Backend, wrote very complex and long aggregations and optimized them. Decreased the response time up to even 70%. Implemented redis caching to serve the data even faster to all over the world with the lowest possible response times.
- Created and set up Docker and Docker Compose, migrated the backend to Compute Engine without any problems.

- Initially developed the mobile application via Android natively with caching, process death handling, MVVM, Jetpack Compose-XML hybrid approach and migrated to Flutter. Developed the application via Flutter and optimized each page to make sure it works with all devices.
- Implemented Vector search via OpenAI embedding and Pinecone. Created a user based recommendation system, mood based recommendation system and took advantage of the vector database.
- Created a virtual machine to regularly vectorize the data and save to pinecone, scrape the data from certain websites and get the data via REST Apis and save to the database. Periodically calculated complex calculations and updated the database. Setup cronjobs to handle certain tasks. With the PM2, every task works and runs periodically without any issues over 2 years and maintaining it regularly.
- Created the landing page for the application and designed and added animations to make it appealing.
- Added import features so that users can import their data from different websites to seamless migration.

Finance Manager

Technologies: Go, Gin-Gonic, MongoDB, Redis, Swagger, Github Actions, ReactJS, Tailwind, Flutter, Dart, Heroku, Javascript, Ubuntu, NodeJS, Docker, Docker Compose.

- Personal finance manager for the users to track all their assets in one place.
- Stocks, commodities, exchanges, crypto and much more. They see all their assets in one place with unified currency and calculate and see their profits and loss.
- Users can also track their daily expanses, track how much they will pay for each credit card, bank account, how much they've spent for what and visualize them with charts and graphics.

My roles and responsibilities:

- Backend, used Golang with MongoDB and Redis for caching. Implemented complex calculations with low response times, created CI/CD via Github actions, created necessary Rest API endpoints. Setup Cronjobs for calculations. JWT authentication and Google and Apple Sign-in implemented.
- Mobile, created the apps with Flutter. Implemented complex and visually appealing charts and graphics, optimized and made sure that application works on every phone with different sizes both horizontally and vertically.
- Created landing page with ReactJS and Tailwind.
- Calculated each changes (profit/loss) precisely to serve the right values.
- Setup a virtual machine to regularly get the exchange, stock, crypto, commodity data and keep up to date.
- Improved the response times with redis caching up to 40%.

Text based Udemy like Platform

Technologies: Golang, MongoDB, Docker, Java, Kotlin, Jetpack Compose.

- Text based, Udemy like platform where users can take notes, study and improve themselves on certain topics and learn.

My roles and responsibilities:

- Designed and implemented RESTful APIs. Wrote aggregations, fixed multiple bugs.
- Developed Native android application. Initially developed via Java and legacy database. Migrated the whole project to Kotlin and Realm database. Implemented the UI's with Jetpack Compose, setup MVVM architecture, dependency injection, process death and memory leak protections. Migrated legacy dependencies and increased the lifetime of the app.

Freelance Developer

Eftax Co, Ltd | Remote | February 2019 - January 2022

Multiple B2B and B2C Projects

Technologies: Go, Python, Swift, Kotlin, Java, Javascript, Django, Firebase, PostgreSQL, MySQL, MongoDB, Spring Boot.

- Worked on various projects, both in-house, B2C and B2B.

My roles and responsibilities:

- Developed secure REST APIs with Spring Boot, Django, Go with low response times and highly secured.
- Developed iOS and Android applications with Firebase, Firebase Cloud Functions, FCM, Google Maps API, MVVM, Java, Kotlin, Swift, MVC.
- Developed map based SNS with machine learning. Backend with Django and PostgreSQL. Implemented SNS with proper security in mind like rate limiting, encryption. Implemented self trained model to detect fake content. Implemented the backend without losing any response time.
- Mobile developed with native Android. Implemented the Google Maps and Firebase. Made sure the application works without any issues and all orientations. Fixed every potential memory leaks and process death.

Android Intern

Mutlubiev | Istanbul | August 2020 - October 2020

Cleaning Service Platform

Technologies: Java, Android

- One of the biggest platform for cleaning service in Turkey.
- Used by up to 100.000 daily people.
- Collaborated with a team of 20 developers across backend, frontend, and mobile.

My roles and responsibilities:

- Contributed and maintained the codebase and added new features, did bug fixes for client Android applications.
- Added leaderboard page for the cleaning workers to track and earn prizes.

Android Developer

creWin | Istanbul | December 2019 - August 2020

Job Search Platform for Maritime

Technologies: Java, Kotlin, Android

- Maritime Job & Career Platform; Matches Seafarers with Ship Owners (HR & Crew Managers) and Crew Manning Agents.

My roles and responsibilities:

- Architected two Android projects; built from scratch and maintained a legacy codebase.
- Implemented MVVM architecture, Retrofit, Hilt, and Room database.
- First application used by job posters and second application used by the job seekers. Migrated old Java code to Kotlin code.
- Applications used to showcase in the USA to appeal investors and get investments and succeeded.

Database Intern

Experteam | Istanbul | July 2018 - August 2018

Oracle Consultant

Technologies: Oracle, PL/SQL, Blockchain

- Experteam is one of the biggest solution partners. Oracle classifies Experteam at the level of Platinum Partner.

My roles and responsibilities:

- Researched and made a presentation about blockchain to the company.
- Created and made queries in PL/SQL.

Skills

Mobile Development (+7 Years)

- Java (+5 years)
- Kotlin (+5 years)
- Swift (+2 years)
- Flutter (+4 years)

Database & Storage

- MongoDB (+5 years)
- PostgreSQL (+6 years)
- Redis (+2 years)
- Pinecone (+1 years)

AI, DevOps & Tools

- Git (+7 years)
- Docker (+4 years)
- Docker Compose (+4 years)

Backend Development (+6 Years)

- Python (+7 years)
- Django (+5 years)
- ExpressJs (+1 years)
- Go (+4 years)
- Spring Boot (+2 years)

Web Development (+3 Years)

- Next.js (+2 years)
- React (+3 years)
- Tailwind & Bootstrap (+2 years)
- Javascript (+2 years)

- Firebase (+5 years)
- Google Cloud (+2 years)
- AWS (+1 years)
- AI Integration (+2 years)

Cover Letter

Dear Hiring Manager,

I'm a computer engineer with over 7 years of experience working across backend, frontend, and mobile development. Throughout my career, I've led teams, built reliable services, and delivered applications that scale. In my current role at Eftax in Osaka, I led the development of a dietary mobile app with 10,000+ downloads and over 1,000 active users. I managed everything from authentication and localization to CI/CD pipelines, ensuring smooth performance and zero downtime. I've also contributed to enterprise solutions like AstraZeneca Japan's internal systems and government-supported projects showcased at Osaka Expo 2025.

Before this, I worked on a range of projects—from building recommendation systems with AI integrations to creating financial management and real estate apps—where I designed APIs, optimized databases, and improved response times by up to 70%. I'm comfortable working across the stack, whether it's backend microservices, mobile apps in Flutter, Kotlin, or Swift, or web platforms with Next.js and React.

I hold a Bachelor's degree in Computer Engineering from Marmara University, where I gained a solid grounding in software design, algorithms, and collaborative problem solving. Alongside my studies, I shared technical insights on my Medium blog, with articles reaching thousands of readers in the Android community.

What excites me most is building software that solves real problems while collaborating with others. I enjoy mentoring teammates, exchanging knowledge, and always aim to write clear, maintainable code that improves with every iteration. I'm confident that my mix of technical skills, leadership experience, and drive for continuous learning would allow me to make a strong contribution to your team.

Thank you for taking the time to review my application. I look forward to the opportunity to discuss how I can help meet your development goals.

Sincerely,
Burak Fidan
