BURAK FIDAN

Computer Engineer

+81 070 8455 3140 | 97burakfidan97@gmail.com | Osaka, Japan | burakfidan.com

Summary

Computer Engineer with 7+ years of experience in backend, database, frontend, and mobile development. I've built, led, and launched projects from scratch, and deployed microservices. I speak Turkish, English, and I use Japanese at a conversational level and still learning. I'm focused on learning new technologies and improving myself.

Education

Bachelor's Degree
Computer Engineering | English
Istanbul Marmara University, Turkey, 2023

Languages

- Turkish - Native
- English - Business
- Japanese - Conversational

Experience

Computer Engineer

Eftax Co, Ltd | Osaka, Japan | April 2024 - Current

Food Dietary App

Technologies: Flutter, Dart, Github Actions, Fastlane, Flavoring, Google ML Kit, Localization, MVVM, Deeplinking

- Map based Food Dietary App where users can purchase products from the Shopify store, find restaurants, stores and tourist spots. It checks ingredient lists via ML Kit to confirm suitability for each user's dietary preferences.
- Over 10,000 downloads on both platforms, and significantly increased website traffic.
- Over 1,000 monthly active users. Almost never had any downtime and works without any interruptions.

My roles and responsibilities:

- Led the mobile team of 3 people. Conducted the necessary planning and research, and developed the application from scratch.
- Setup the project scalable and well documented via markdown files. Implemented Fastlane and flavoring for deployment and separation of production and test environment via Github Actions.
- Mentored one intern and assigned him tasks to teach and make him understand the foundation of the development.
- Set up the entire Authentication system with Google and Apple oauth2, used interceptors to make sure that authentication flow is seamless and works without any issues.
- Set up and optimized Google Maps, created clustering based on zooming, integrated Google ML Kit for text recognition and extraction.

- App is 100% localized and supports 4 languages and scalable to more languages without any issues and can be changed any time without any issues.
- Optimized the code against unnecessary builds and memory leaks to make the performance smooth even on low tier devices.
- Implemented smart refresh rate handling so depending on the device refresh rate, Flutter will automatically match it and make the animation smoother.
- Implemented Deep Linking to handle the URL redirections and incoming notifications. Also handles notifications both locally and when background.
- Google maps with clustering added, depending on how zoomed in or out the user, it'll cluster together and show the total number of items in that area so that user won't be overwhelmed by the number of markers.
- Debugged and optimized the appsize, removed unnecessary files, dependencies and compressed the images or changed with SVG alternatives.
- App is heavily image based so optimized the images via caching without being too aggressive. Implemented in a way so that UI thread won't overloaded and memory won't be used too much.

Astrazeneca Japan's Frontend and Backend
Technologies: Flask, Python, DynamoDB, Redis, Next.JS, Tailwind, Typescript, Sentry, AWS CloudFormation, Docker

- AstraZeneca Japan's in-house website. Used by their own employees.

My roles and responsibilities:

- On the backend worked with 5 people and on the frontend worked with 3 people.
- Fix the multiple bugs both on frontend and backend. Adjusted and made changes on Rest API endpoints and reflected on the frontend.
- From the figma, implemented the designs exactly like requests and implemented.
- Fixed complex bugs that are multi-layered and required comprehensive understanding of the code.

ミツケア Frontend
Technologies: Wordpress, Php, Tailwind

- "ミツケア" is a website to introduce information on startups in Health-O Project. Aims to raise awareness of smart health and to help you "find" the smart health service that suits you. Supported and featured by the Osaka Prefectural Government and shown at the Osaka Expo 2025.

My roles and responsibilities:

- I worked with 3 people. Developed the website from scratch and implemented the exact same UI from Figma. Added animations that were requested.
- Implement a custom blog system by the needs of the client so that admin can post the blog posts the way they want.
- Even though it was a tight schedule, I delivered the website on time and shipped it to production.

Kansai Area Real Estate

Technologies: Kotlin, Java, Swift, Firebase, MVVM, MVC.

- Real estate website for customers to find and rent or purchase the houses that they want in the Kansai area. Especially targeting the foreigners and providing easy solutions and support.
- The website had an already existing landing page but wasn't enough for the company and wanted to expand it and control everything for themselves.
- The website allows different real agencies to post on the website too.

My roles and responsibilities:

- Legacy app was written with Java and spaghetti code, refactored the necessary parts to Kotlin. Migrated and made the application 37% Kotlin to increase the performance and utilize the Kotlin's library support and functions.
- Made the Android app MVVM with repository pattern. Improved the UI quality, code quality and made it more scalable and readable.
- Developed iOS natively to match the Android version with Swift with MVC pattern. Used Storyboard. Increased the app performance 30%. Secured the app against Process Death and fixed memory leak issues.

Fullstack Developer

Freelance | July 2022 - June 2024

Content Tracking and Recommendation

Technologies: Github Actions, Flutter, Dart, Kotlin, MVVM, Deeplink, Hilt DI, Jetpack Compose, Coroutines, Room, Retrofit, Coil.

- Entertainment tracking and recommendation app. Users can track the content that they watched or play, get recommendations based on their lists, search and filter by many options.
- Application had runtime over 95% percent without any major crash or bug. Have generated recommendations over 100.000 times.

My roles and responsibilities:

- Planned, architected and developed everything from scratch.
- Initially developed the mobile application via Android natively with caching, process death handling, MVVM, Jetpack Compose-XML hybrid approach. Used HIlt for dependency injection. For caching and http client, used room and retrofit.
- Took advantage of Coroutines for concurrency in viewmodels and provided seamless loading and error UI's with shimmer for better user experience.
- Later, migrated to Flutter due to requirement changes. Developed the application via Flutter and optimized each page to make sure it works with all devices.
- Same as other applications, made sure that app doesn't have any memory leak issues. Removed the setState and migrated to MVVM with Provider. Made sure that widgets won't rebuild unnecessarily by isolating them, Repaintboundary etc.

- For this project's Android version, I decided to write blogs to show my knowledge and wrote about 16 blogs on Medium. My blogs got featured on well known Android communities and channels. They got over 40000~30000 views each, still they are being read by thousands of people every month.

Finance Manager
Technologies: Github Actions, Flutter, Dart.

- Personal finance manager for the users to track all their assets in one place.
- Stocks, commodities, exchanges, crypto and much more. They see all their assets in one place with unified currency and calculate and see their profits and loss.
- Users can also track their daily expenses, track how much they will pay for each credit card, bank account, how much they've spent for what and visualize them with charts and graphics.

My roles and responsibilities:

- Mobile, created the apps with Flutter. Implemented complex and visually appealing charts and graphics, optimized and made sure that application works on every phone with different sizes both horizontally and vertically.
- Optimized the graphs so that they'll perform good on every device with different shape or form. Made complex UI calculations on background to prevent UI thread being frozen and when calculations finish, present to the UI.
- Due to request, made the Flutter app with Cupertino widgets to make it iOS first.

Freelance Developer

Eftax Co, Ltd | Remote | February 2019 - January 2022

Multiple B2B and B2C Projects
Technologies: Go, Python, Swift, Kotlin, Java, Javascript, Django, Firebase, PostgreSQL, MySQL, MongoDB, Spring Boot.

- Worked on various projects, both in-house, B2C and B2B.

My roles and responsibilities:

- Developed iOS and Android applications with Firebase, Firebase Cloud Functions, FCM, Google Maps API, MVVM, Java, Kotlin, Swift, MVC.
- Developed map based SNS with machine learning. Backend with Django and PostgreSQL. Implemented SNS with proper security in mind like rate limiting, encryption. Implemented self trained model to detect fake content. Implemented the backend without losing any response time.
- Mobile developed with native Android. Implemented the Google Maps and Firebase. Made sure the application works without any issues and all orientations. Fixed every potential memory leaks and process death.

Android Intern

Mutlubiev | Istanbul | August 2020 - October 2020

Cleaning Service Platform

Technologies: Java, Android

- One of the biggest platform for cleaning service in Turkey.
- Used by up to 100.000 daily people.
- Collaborated with a team of 20 developers across backend, frontend, and mobile.

My roles and responsibilities:

- Contributed and maintained the codebase and added new features, did bug fixes for client Android applications.
- Added leaderboard page for the cleaning workers to track and earn prizes.

Android Developer

creWin | Istanbul | December 2019 - August 2020

Job Search Platform for Maritime

Technologies: Java, Kotlin, Android

- Maritime Job & Career Platform; Matches Seafarers with Ship Owners (HR & Crew Managers) and Crew Manning Agents.

My roles and responsibilities:

- Architected two Android projects; built from scratch and maintained a legacy codebase.
- Implemented MVVM architecture, Retrofit, Hilt, and Room database.
- First application used by job posters and second application used by the job seekers. Migrated old Java code to Kotlin code.
- Applications used to showcase in the USA to appeal investors and get investments and succeeded.

Database Intern

Experteam | Istanbul | July 2018 - August 2018

Oracle Consultant

Technologies: Oracle, PL/SQL, Blockchain

- Experteam is one of the biggest solution partners. Oracle classifies Experteam at the level of Platinum Partner.

My roles and responsibilities:

- Researched and made a presentation about blockchain to the company.
- Created and made queries in PL/SQL.

Skills

Mobile Development (+7 Years)

- Java (+5 years)
- Kotlin (+5 years)
- Swift (+2 years)
- Flutter (+4 years)

Database & Storage

- MongoDB (+5 years)
- PostgreSQL (+6 years)
- Redis (+2 years)
- Pinecone (+1 years)

AI, DevOps & Tools

- Git (+7 years)
- Docker (+4 years)
- Docker Compose (+4 years)

Backend Development (+5 Years)

- Python (+7 years)
- Django (+4 years)
- Flask (+2 years)
- Go (+4 years)
- Spring Boot (+2 years)

Web Development (+3 Years)

- Next.js (+2 years)
- React (+3 years)
- Tailwind & Bootstrap (+2 years)

- Firebase (+5 years)
- Google Cloud (+2 years)
- AWS (+1 years)
- AI Integration (+2 years)

Cover Letter

Dear Hiring Manager,

I'm a computer engineer with over 7 years of experience working across backend, frontend, and mobile development. Throughout my career, I've led teams, built reliable services, and delivered applications that scale. In my current role at Eftax in Osaka, I led the development of a dietary mobile app with 10,000+ downloads and over 1,000 active users. I managed everything from authentication and localization to CI/CD pipelines, ensuring smooth performance and zero downtime. I've also contributed to enterprise solutions like AstraZeneca Japan's internal systems and government-supported projects showcased at Osaka Expo 2025.

Before this, I worked on a range of projects—from building recommendation systems with AI integrations to creating financial management and real estate apps—where I designed APIs, optimized databases, and improved response times by up to 70%. I'm comfortable working across the stack, whether it's backend microservices, mobile apps in Flutter, Kotlin, or Swift, or web platforms with Next.js and React.

I hold a Bachelor's degree in Computer Engineering from Marmara University, where I gained a solid grounding in software design, algorithms, and collaborative problem solving. Alongside my studies, I shared technical insights on my Medium blog, with articles reaching thousands of readers in the Android community.

What excites me most is building software that solves real problems while collaborating with others. I enjoy mentoring teammates, exchanging knowledge, and always aim to write clear, maintainable code that improves with every iteration. I'm confident that my mix of technical skills, leadership experience, and drive for continuous learning would allow me to make a strong contribution to your team.

Thank you for taking the time to review my application. I look forward to the opportunity to discuss how I can help meet your development goals.

Sincerely,
Burak Fidan
